

Welcome to Genius Tech SA.EU and Edge Protect.....

The model of operation that **Genius Tech SA.EU** uses was founded, conceived and realized in 2011. By the end of 2011 the software and products were available to the public. A few years later the second founder was invited to the concept and with some system, server and service upgrades our service offering was ready to go.

Since then and with over 30 years of experience and knowledge in the Hardware, Software, IT, Navigation, Logistics and Tracking Field, we offer you our Tracking Units and Navigation Platform for your use and convenience coupled with other Powered Products that further enhance our commitment to safety and security for yourself and your assets.

With these up to date proficient varieties of GPS trackers and Safety Products which are well tested and have been in operation for over 12 years in the Industry are well adept in their functions. These smart and durable products are sturdy enough to last for a long period of time extending passed the manufacturer warranty. These products are sustainable against demanding uses and can resist all sorts of external impacts and elements.

We all know that industry is based on the flow of goods from one place to another. Flow malfunctions can eventually lead to downtime, leaving dissatisfied customers behind and of course above all the safety of drivers, employees, family members and all loved ones is of outmost importance.

We have amalgamated our service offering with the founder of **Edge Protect**, a product founded and devised by Gordon Pope who has been in operation since 1993 as an approved Shatterprufe Auto glass Fitment Centre in South Africa and stocks the complete range of Auto glass products and their Shatterprufe catalogue allows staff to be continually updated to all required windscreen fitment procedures. All staff have been trained according to the Vehicle Manufacturers specific product bonding requirements and they continually upgrading fitment procedures according to the current International Standards.

Together we pride ourselves on our service and long term commitment to our customer base and we continually strive to find ways of reducing cost's to our clients.

In March 2012 Gordon started a research and development programme as to why over 60 percent of all windscreens that cracked were from the outer 50 mm edge of a windscreen. It was found that to strengthen the outer perimeter of a windscreen where it is bonded to the vehicle the windscreens outer perimeter is tempered which creates a Very sensitive 50 mm Tensile zone.

After extensive product testing a Patented application was introduced that when applied to the sensitive outer windscreen perimeter, it would protect that sensitive Tensile zone from road debris and increase the lifespan of the windscreen.

Edge Protect is now being offered in place of the expensive bolt on truck windscreen steel guards. Edge Protect is a product that can be fitted prior to any stone impacts on the windscreen or at replacement. Due to the way

windshields are manufactured and mounted in vehicles, the amount of stress around the outer 50 mm perimeter is significantly greater than inside that area and will fracture 2.5 times easier than the rest of the windshield. Most replacements are from an Edge Crack, which occurs because the first 50 mm around the outer perimeter of windshields have 2 manufacturing stress areas.

During the manufacture of a windscreen, controlled compressive stresses are introduced along the perimeter of the glass. This makes it more resistant to mechanical stresses e.g. during installation or body twisting of the vehicle and to thermal stresses applied to the glass as a result of thermal fluctuations.

So whether you are an individual owner of a vehicle or a fleet of vehicles, LDV's, trucks or any movable asset on wheels and do not want to compromise the structural integrity, safety and security of your assets and to preserve and increase the lifespan of your windscreens and assets , then take advantage of our very affordable products and pricing options available to you

Contact us for an assessment or find us on our ONLINE STORE – www.edgeprotect.eu/shop

We hope to have you onboard soonSafety and Security is all of our concerns.....

Sincerely

Stelio N Avramidis
